About Me

Software engineer with more than 7 years of experience building mobile and web applications, with a primary focus on React Native, React, and TypeScript.

I have experience developing and maintaining real, large-scale projects across domains including social networks, education, communication, and utility applications.

I have hands-on experience in project architecture, UI development, state management, API integration, online and real-time features, payments and subscriptions, media processing, and performance optimization.

Alongside mobile development, I am actively developing and strengthening my React Web skills and working with common tools and libraries used in modern React projects.

I also use AI tools and coding agents for feature development, refactoring, debugging, testing, code review, and documentation.

Work Experience

TOGETHING – Netherlands | Remote

React Native Developer

January 2025 – Present • Hourly Contract

A social platform focused on building positive habits, goal setting, and user engagement.

- Developed and improved various application features with React Native.
- Designed and improved the application state management architecture using Redux and Zustand.
- Implemented real-time communication and synchronization features with SignalR.
- Implemented and maintained subscription and in-app purchase systems for Android and iOS.
- Optimized page rendering speed and reduced load time by about 35%.
- Improved performance of heavy application sections and media file processing.
- Collaborated with Backend and Product teams to develop new features.
- Used AI tools and coding agents for development, debugging, code improvement, testing, and documentation.

Project: Togething – A social platform for goal setting, building positive habits, and user engagement.

APSY – California, United States | Remote

React Native Developer

October 2021 – July 2026 • Full-time

Worked on multiple large-scale applications in education, communication, and interactive experiences.

- Developed and maintained large-scale React Native applications.
- Optimized speed and performance of pages and heavy lists.
- Used lazy loading and various techniques to reduce resource consumption.
- Implemented communication between the JavaScript and Native layers in React Native.
- Connected applications to REST and GraphQL services.
- Improved app startup time and reduced unnecessary re-renders.
- Collaborated with Backend, Design, and Product teams.
- Performed code reviews and participated in technical and architectural decisions.
- Mentored and guided junior developers.
- Used AI tools for feature development, code review, debugging, testing, and documentation.

Projects: HUDU, COMMON-TIME, MVP, Bitcoin-Bachelors, SocialOrder, Salam Maman

IMPROVER DIGITAL – Istanbul, Turkey | Remote

React Native Developer

January 2020 – September 2021

- Developed and maintained Android and iOS mobile applications with React Native.
- Designed interactive user interfaces and animations.
- Used Reanimated and Lottie to create a better user experience.
- Implemented chat, notification, and real-time communication features.
- Worked with Socket.io, WebRTC, and Firebase.
- Collaborated with the team to develop and improve application features.

Project: Alba Education – An online learning platform enabling direct teacher–student interaction.

Personal Projects

Damdast

Everyday utility application for Android and iOS

A multi-purpose everyday application built with React Native and TypeScript, designed with a focus on user experience, performance, and an offline-first architecture.

Technologies

React Native • TypeScript • React Native New Architecture • Zustand • UniStyles • MMKV • React Native Reanimated • i18next • Notifee • Keychain

Key Features

- Personalized home screen
- Utility and calculation tools (calculator, unit converter, everyday tools)
- Scanner
- Installment management and payment reminders
- Work-hours management with Excel export
- Timer / Countdown / Stopwatch
- Photo, video, and audio compression
- Offline games such as 2048, Minesweeper, and Sudoku

- Music section and offline content playback
- Theme system and UI personalization
- Persian and English support + RTL and LTR
- Onboarding
- App Lock and device security features
- Backup and data export
- Gamification and XP system
- Responsive design for mobile and tablet
- Ad management with a focus on preserving user experience

Release

This project has been developed as a real product and published on Iranian app stores.

- SibApp: [SibApp Link](#)

React Web Portfolio

Personal project – Resume and portfolio website

Currently developing a personal professional website to showcase work experience, skills, and projects using React, TypeScript, and Vite.

Technologies & Libraries

Core: React • TypeScript • Vite

Routing & UI: React Router • Tailwind CSS • shadcn/ui • Lucide React

Forms & Validation: React Hook Form • Zod

Date & Localization: date-fns • i18next • react-i18next

Code Quality: ESLint • Prettier

Mobile: Capacitor

Project Features

- Responsive design for mobile, tablet, and desktop
- Component-based UI with reusable components
- About, resume, skills, and projects pages
- Project showcase with direct links to work samples
- Dark / Light theme support
- Animation and micro-interactions
- Multi-language support
- Validated forms
- Data and table presentation
- Code quality standards
- Prepared for web and, if needed, mobile with Capacitor
- Version control and source management with Git and GitHub

Links

Technical Skills

Mobile & Web Development

React Native • React • TypeScript • JavaScript • Vite • Capacitor

React Web

React Router • Tailwind CSS • shadcn/ui • Lucide React • TanStack Query • Zustand • Axios • TanStack Table • Recharts • React Hook Form • Zod • date-fns • i18next • react-i18next

Testing & Code Quality

ESLint • Prettier • Debugging • Code Review

State Management & Project Structure

Redux Toolkit • Redux-Saga • Zustand • Valtio

APIs & Server Communication

REST API • GraphQL • Axios • Apollo Client

Mobile Features

In-App Purchase & Subscription • Push Notification • Deep Linking • File System • Media Handling • Firebase • WebRTC • SignalR • Socket.io

Optimization & Performance

Rendering Optimization • Lazy Loading • Code Splitting • Memoization • FlashList • MMKV • Nitro Modules

React Native Architecture

New Architecture • JSI • TurboModules • Native Modules

UI & Animation

Reanimated • Lottie • Gesture Handler • SVG • Bottom Sheet • NativeBase

Tools

Git • GitHub • Android Studio • Xcode • Firebase • Google Play Console • App Store Connect

Software Engineering

OOP • SOLID • Design Patterns • Clean Code • Code Review • Debugging

AI-Assisted Development

AI Coding Agents • AI-Assisted Development • Code Generation • Refactoring • Debugging • Test Generation • Code Review • Documentation • Prompt Engineering • Context Engineering

Soft Skills

- Strong ownership and full follow-through on tasks
- Problem-solving
- Fast learning of new technologies
- Effective collaboration with team members
- Experience working in remote teams

- Ability to review and improve existing codebases
- Clear communication with technical and product teams

Achievements

- Optimized performance and improved UI speed in large-scale React Native projects.
- Built real-time communication features with SignalR, Socket.io, and WebRTC.
- Implemented subscription and in-app purchase systems for Android and iOS.
- Optimized media-heavy applications and resource-intensive processing workflows.
- Experience releasing and managing production versions for Android and iOS.
- Developed a real personal React Native project and published it on Iranian app stores.
- Built a web portfolio with React and TypeScript to showcase frontend capabilities.
- Practically applied AI tools in the software development process.

Education

B.Sc. in Computer Engineering – Computer Systems Architecture

Semnan University – Iran

2015 – 2020 | 1394 – 1399 (Solar Hijri)

Language

English: Able to read technical documentation and communicate in a work environment
